

■ 2-Month AI Course

Designed for Beginners Aged 15–18

No Coding Required • Real Projects • Professional Profile

Students will learn to use AI tools confidently, build a professional online identity, and complete real projects — all without any prior coding knowledge. By the end of 2 months, every student will have a live portfolio, GitHub profile, and LinkedIn account.

WEEK 1–2 | AI Foundations + Professional Identity

■ Week 1-2 — Understanding AI + Setting Up Your Online Presence

Theory:

- What is AI — explained simply (Machine Learning, LLMs, generative AI)
- ChatGPT vs Claude vs Gemini — differences and best use cases
- The future of AI — opportunities and careers in Pakistan and globally
- Why a professional online presence matters from day one

Practical:

- Build a professional CV using ChatGPT
- Set up LinkedIn — complete bio, profile photo, skills section
- Set up GitHub — write an AI-generated profile README

Real Project: Identify a real problem in your life and use AI to solve it — share the result as your first LinkedIn post

■ **Validation:** LinkedIn profile live + GitHub profile live + first post published

WEEK 3–4 | Prompt Engineering + Content Creation

🐼 ■ Week 3-4 — Mastering Prompts + Creating with AI

Theory:

- What makes a great prompt — role, context, format, tone
- Chain-of-thought and few-shot prompting techniques
- What kind of content performs well on LinkedIn
- Introduction to AI image generation

Practical:

- Write 10 different prompts on one topic — compare and find the best
- Create professional images using Canva AI
- Write a video script using CapCut AI
- Publish a weekly AI-assisted post on LinkedIn

Real Project: Create a complete content package on any topic — blog post + image + video script — and publish it live on LinkedIn

■ **Validation:** 3-4 LinkedIn posts live + growing connections

WEEK 5–6 | Personal AI Project

■ Week 5-6 — Build Something That's Yours

Theory:

- What is a personal project and why it matters for a portfolio
- How to combine your personal interests with AI
- How to present a project properly on GitHub
- Why a README file is important

Practical:

- Choose a personal interest — music, sports, cooking, art, anything
- Use AI to build something around it — a chatbot, content series, tool, or presentation
- Upload the project to GitHub with a proper README
- Announce the project on LinkedIn with screenshots

Real Project: A personal AI project that reflects your personality and interests

■ **Validation:** Project live on GitHub + LinkedIn announcement post published

WEEK 7–8 | Portfolio Website + Everything Connected

■ Week 7-8 — Your Complete Professional Package

Theory:

- Why a portfolio website matters — what employers and clients look for
- Basic concept of HTML/CSS — understand it, not memorize it
- LinkedIn + GitHub + Portfolio = a complete professional identity

Practical:

- Build a portfolio website using Bolt.new — no code required
- Upload the website code to GitHub
- Update LinkedIn — add all projects, skills, and portfolio link
- Link GitHub and LinkedIn inside your portfolio website

Real Project: A complete, live professional package — all platforms connected and live

■ **Validation:** Live portfolio website + all platforms linked to each other

WHAT EVERY STUDENT WILL HAVE AFTER 2 MONTHS

Platform	What They'll Have	Proof
■ LinkedIn	Active profile + 6-8 posts + growing network	Live link
■ GitHub	Account + 2-3 uploaded projects	Live link
■ Portfolio	Live website showcasing all work	Live link
■ AI Project	Something they built themselves with AI	GitHub + demo
■ CV	A polished, AI-generated professional CV	PDF

WEEKLY VALIDATION DASHBOARD

Week	Student Deliverable	Proof
1-2	LinkedIn + GitHub set up + first post published	Profile links
3-4	Content package published live on LinkedIn	Post links
5-6	Personal AI project uploaded to GitHub	GitHub link
7-8	Live portfolio website with everything connected	Website link
